# Public Wildfire Resource Examples

-Kate Emmel

This document looks at 3 public GIS Wildfire resources and looks at their functions and potential improvements to serve as a basis for my own *practice* public Wildfire resource project.

- https://data.statesmanjournal.com/fires/
  - Maps Fires and smoke hazards in the United States
  - Uses MapBox for interface
  - Clearly displays wildfires
  - Not Colorful, may be confusing to someone unfamiliar with online maps

- https://www.oregon.gov/odf/fire/pages/firestats.aspx
  - - Active fires map for the State of Oregon
  - - Uses IntTerra / ESRI for interface
  - Users can easily choose which layers are active
  - Users can add their own layers from ArcGIS Online
  - Users have a measure tool which lets them see how far away a fire is from them
  - I do not like that the legend is not easy to view in tandem with the map

- https://eugene-pwe.maps.arcgis.com/apps/webappviewer/index.html?id=99030ba72efe46b2a5c0bb31ccf55004
  - My local Springfield Fire department evacuation zone map
  - Uses ESRI
  - I like that I can see which evacuation zone I live in and where the public assembly places are by typing in my address
  - I do not like that the legend is not very clear
  - The map was not convenient to find on their website
